

MASSIVE BACKEND MOTION!

The **Breakaway** has an RG of 2.528 and a differential of 0.041. This combination of core dynamics and HK22 Solid, which is polished, yields a very definitive backed reaction. Our goal was to create a symmetrical ball with a massive backend motion while increasing the hook window to be sure it has plenty of continuation. The **Breakaway** hits the Radical target of increasing backend motion and maintaining continuation through the pins. Combining the **Breakaway** symmetrical core with the HK22 polished solid cover, you get great performance and a great shelf appeal.
